

Session 11

Introduction to DeFi

Blockchain Protocols and Decentralized Applications

Blockchain

- Cool technology
- Who is in control?
- Who own it?
- Decentralized control
- Use cases?

DeFi

TradFi - Payments

- Classic payment: actors?
- Trust actors: bank, payment processor
- Issues:
 - Extra cost
 - Reliability issues (lack of availability, loss of funds)
- Positive side:
 - Guarantee Funds
 - Regulations

TradFi - Monetary policies

- Government/Banks powerful decisions
- Print money - inflation
- Allow Borrowing?
- Establishing the lending/borrowing rate
- Stop you from having a bank account
- Lock your funds/assets
- Payments over 5000 RON must be vetted/approved
- If business considered not legit, block access to banks
 - Ex: medicinal purposes

DeFi

CeFi vs DeFi

<https://appinventiv.com/blog/defi-vs-cefi/>

DeFi

- Logic in Smart Contracts
- Decision Factor - Code
- Open to anyone
- No “blind trust” needed - just read the code
- DeFi Cost -> Blockchain Cost
- Custody: ownership
- Components:
 - Cryptography
 - Blockchain
 - Smart Contracts

DeFi

- Permissionless
 - No necessary approval/acceptance
 - Increased Accessibility
- Trustless
 - Transparent decision making - code is king
 - Public Verification: Transparent for **ALL** transactions
- Immutability
 - Code is law

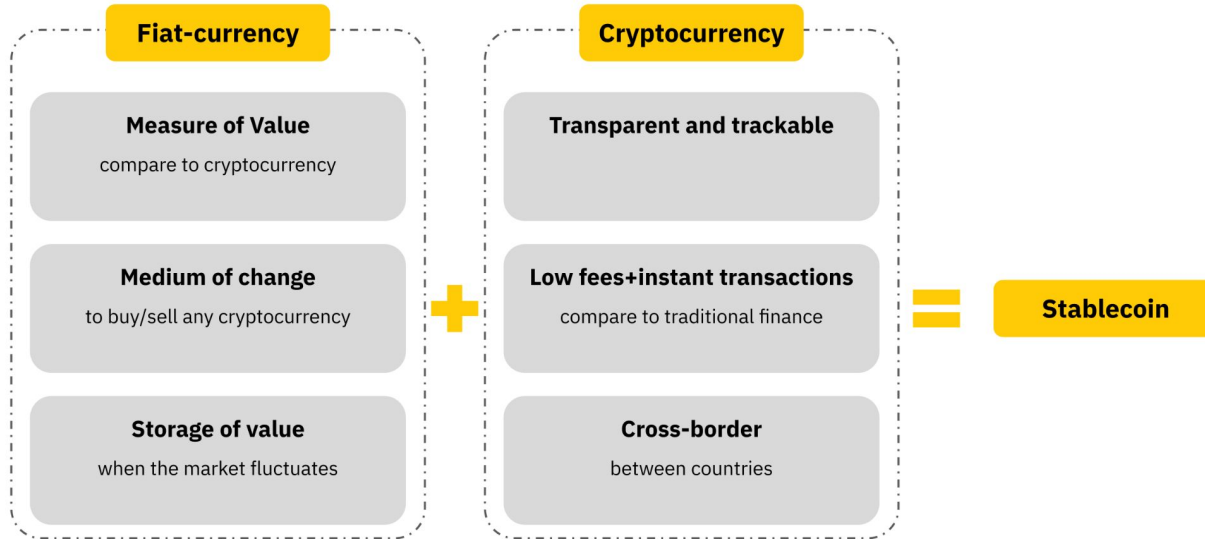

DeFi

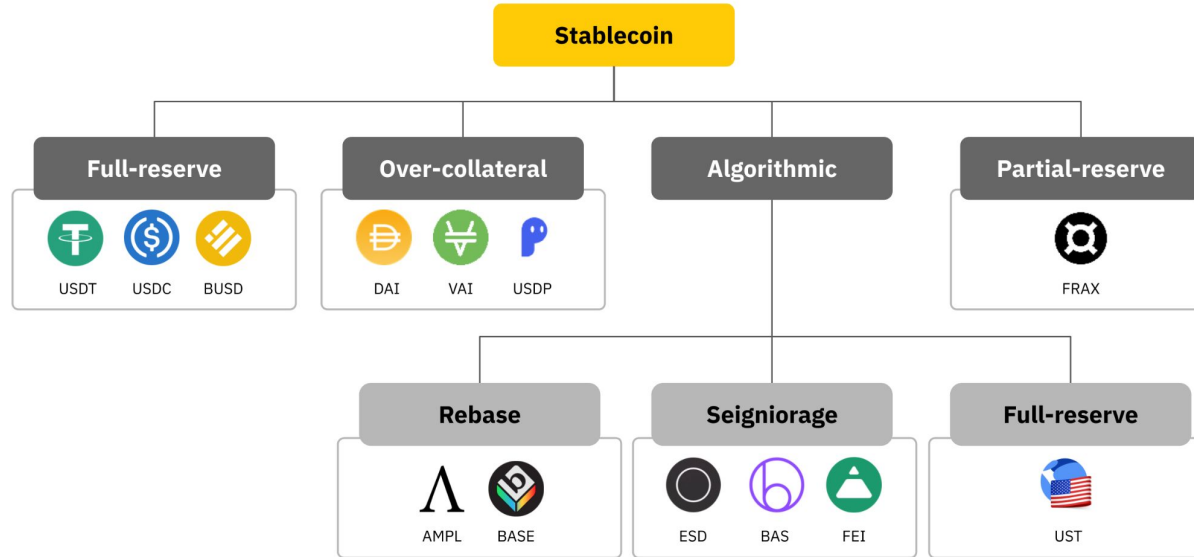

- Stablecoins
 - DAI, TETHER, USDC - 1\$
 - Mint/Burn
- Lending and Borrowing
 - **Collateral:** TradFi vs DeFi
 - **Legal bound of payback:** TradFi vs DeFi
 - **Trust actor:** TradFi vs DeFi
- Decentralized Exchanges (DEX)
 - High Fees on exchanges
 - Automated Market Makers
- Insurance
 - Decision making is written in code
 - Farming example

Stablecoins

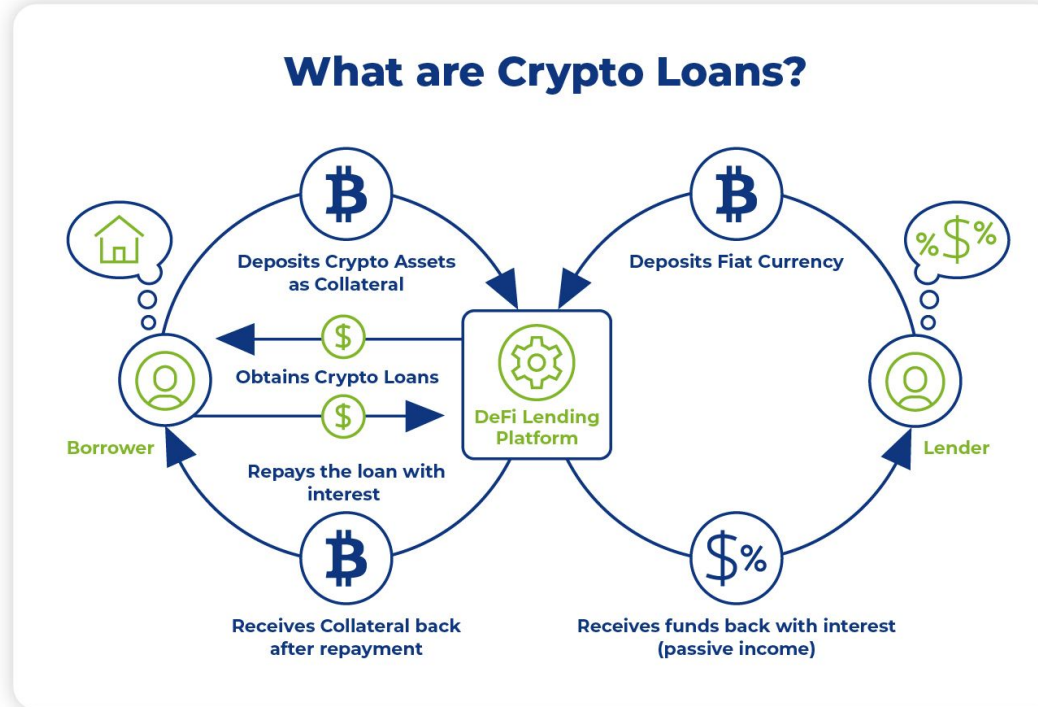

ROLE & ADVANTAGE OF STABLECOIN

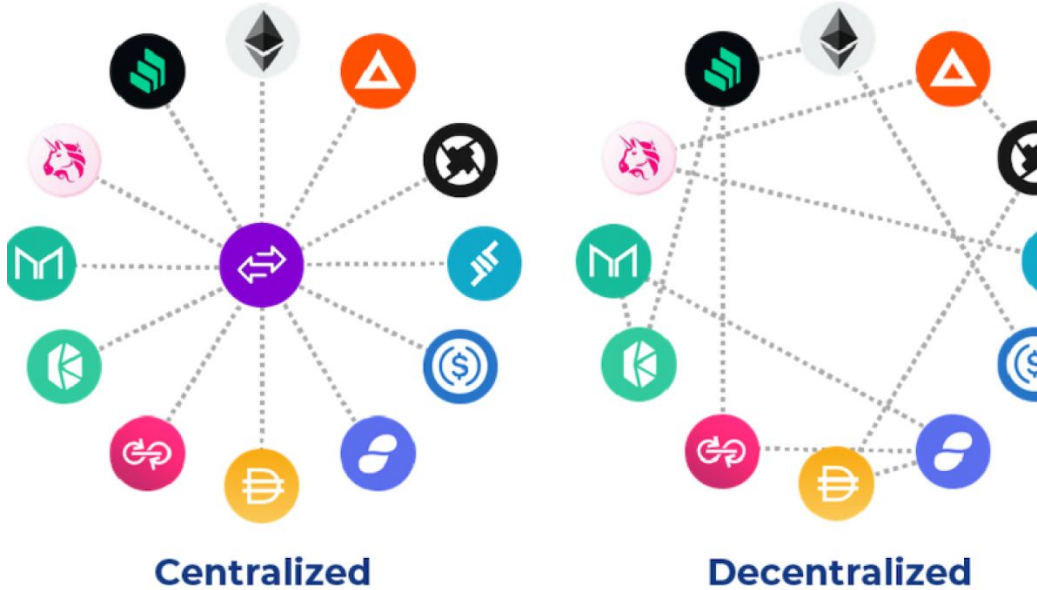

Stablecoins

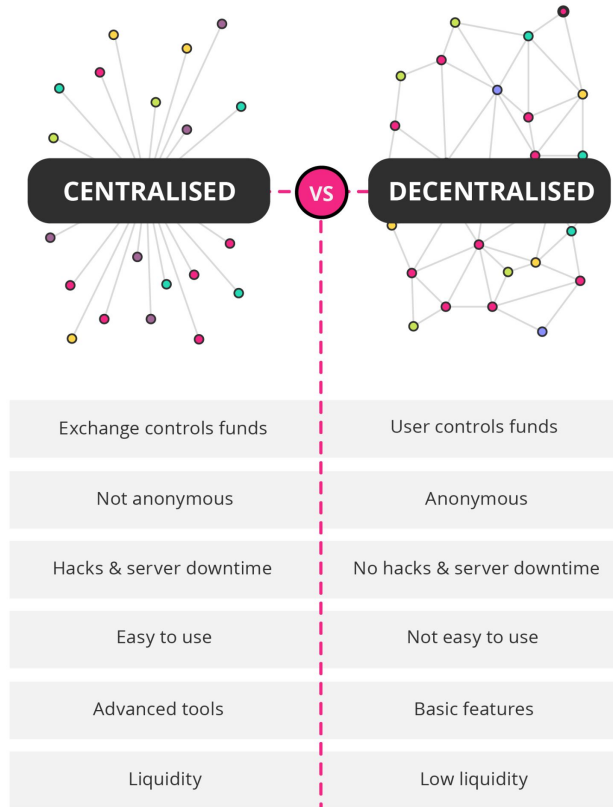

Lending and Borrowing

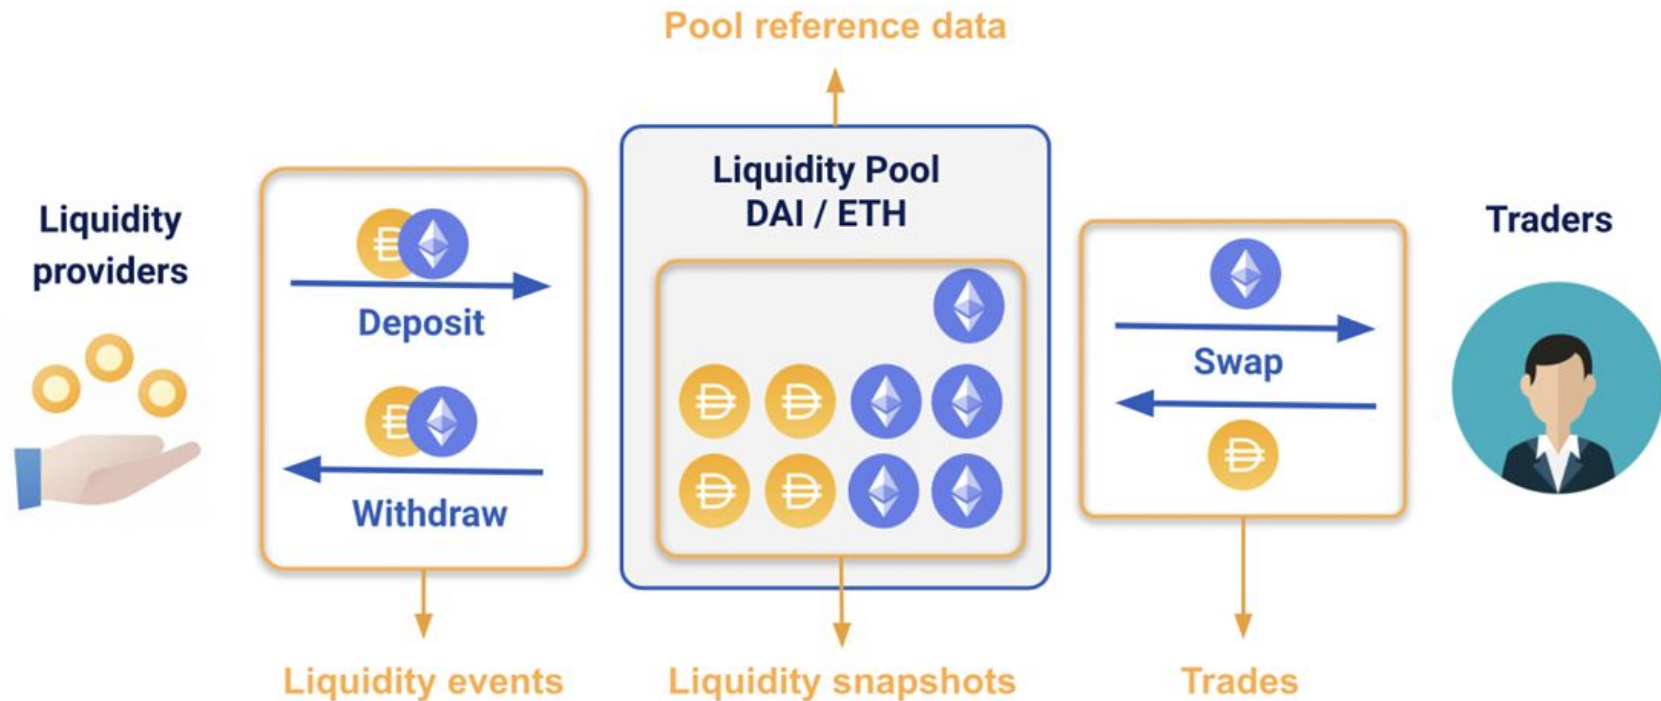

CEX vs DEX

CEX vs DEX

DEX - Liquidity Providers

DEX

- Actors:
 - Liquidity Providers
 - Users wanting to swap
- Swap = Transaction on Blockchain
- Fees:
 - Fee for transaction (goes to validators)
 - Fee for swapping (goes to liquidity providers)

DEX

- Demo:
 - Swap
 - Create our token
 - Put a price on our token
 - Lending & Borrowing

CEX

- Exchange platforms
- Know Your Customer (KYC)
- Anti Money Laundering (AML)
- Customer support

Automated Market Makers

- Sell token A, buy token B
 - Exchange RON to EUR -> sell RON, buy EUR
- CEX exchange rate
 - Central entity (BNR, Dristor Exchange)
 - Demand and Offer (stock prices)
 - User finds price acceptable -> performs transaction
- DEX - exchange rate
 - Algorithm

Automated Market Makers
